

ITA0304 Mobile computing

Scenario 1 – Online Food Delivery App

Title

Online Food Delivery App – Mobile UI Design

Objective

To design a mobile food delivery application using Figma that allows users to browse restaurants, view menus, add food items to a cart, and place orders.

Application Name

FoodieGo

Screens Designed

1. Login Screen

- FoodieGo logo and app name
- Email and password fields
- Forgot Password option
- Login button
- Sign Up option

2. Home Screen

- Delivery location
- Search bar
- Food categories: Pizza, Burger, Biryani, Chinese, Desserts
- Popular restaurant cards
- Bottom navigation

3. Restaurant Menu Screen

- Pizza Palace
- Rating and delivery time
- Restaurant description
- Food items with images, prices and ADD buttons

- Margherita Pizza – ₹249
- Farmhouse Pizza – ₹329
- Paneer Tikka Pizza – ₹349
- Garlic Bread – ₹149

4. Cart Screen

- Selected items and quantities
- Quantity controls
- Subtotal – ₹547
- Delivery Fee – ₹40
- Total – ₹587
- CHECKOUT button

5. Order Confirmation Screen

- Order confirmation message
- Order ID – #FG10245
- Restaurant – Pizza Palace
- Total – ₹587
- Delivery status
- Estimated delivery – 25–30 minutes
- Delivery address – Home
- TRACK ORDER button

Figma Features Used

- Frames
- Auto Layout
- Components
- Icons
- Prototype interactions

Prototype Flow

Login → Home → Restaurant Menu → Cart → Order Confirmation

Screenshots

GitHub Repository :

<https://github.com/Shalini387/ITA0304-MC>

Result

The **FoodieGo** mobile food delivery application was successfully designed and prototyped in Figma with five connected screens, reusable UI components, Auto Layout, icons, and interactive navigation.

Scenario 2 – College Student Attendance App

Title

College Student Attendance App – UI/UX Design

Objective

To design a mobile student attendance application using Figma that allows students to view their overall attendance percentage, subject-wise attendance details, attendance calendar, and profile information.

Application Name

AttendEase

Screens Designed

1. Login Screen

- AttendEase logo and app name
- Student ID field
- Password field
- Forgot Password option
- Login button

2. Dashboard

- Student name – Shalini Reddy
- Register Number – 192472213

- Overall Attendance – 86%
- Subject-wise attendance summary:
 - Data Structures – 90%
 - Java Programming – 85%
 - Mobile Computing – 82%
 - NLP – 88%
- Bottom navigation: Dashboard, Attendance, Profile

3. Subject Details Screen

- Subject – Mobile Computing
- Classes Conducted – 50
- Classes Attended – 41
- Attendance Percentage – 82%
- Attendance progress indicator
- Recent attendance information
- Back navigation

4. Attendance Calendar

- Monthly attendance calendar
- Present status
- Absent status
- Leave status
- Status legend for easy identification
- Navigation to other screens

5. Profile Screen

- Student photo/avatar
- Name – Shalini Reddy
- Department – CSE – AI & Data Science
- Year – 3rd Year

- Register Number – 192472213
- Edit Profile button

Figma Features Used

- Frames
- Auto Layout
- Reusable Components
- Buttons
- Navigation elements
- Icons
- Prototype interactions

Prototype Flow

Login → Dashboard → Subject Details

From the Dashboard:

Attendance → Attendance Calendar

Profile → Profile Screen

Back arrows and bottom navigation are used to move between the connected screens.

GitHub Repository

Repository:

<https://github.com/Shalini387/ITA0304-MC>

Result

The **AttendEase** student attendance application was successfully designed and prototyped in Figma with five connected screens. The application uses **Auto Layout, reusable components, navigation elements, icons, and prototype interactions** to provide students with a simple interface for viewing and managing their attendance information.

Scenario 3 – E-Commerce Clothing App

Title

E-Commerce Clothing App – Product Purchase Interface

Objective

To design a mobile clothing shopping application using Figma that allows users to browse products, view product details, select sizes, add products to the cart, and complete checkout.

Application Name

StyleHub

Screens Designed

1. Home Screen

- StyleHub logo
- Search bar
- Categories: Men, Women, Kids, Shoes, Accessories
- Promotional banner: “**Summer Collection – Up to 40% Off**”
- Featured products with images, names, prices, and ratings

2. Product Listing Screen

- **Women’s Collection**
- Search, filter and sort options
- Product cards with image, name, price, rating, and heart icon
- Products:
 - Classic Dress – ₹1,499
 - Casual Shirt – ₹999
 - Denim Jacket – ₹1,799
 - Sneakers – ₹2,299

3. Product Details Screen

- Large product image
- Product name – Classic Dress
- Price – ₹1,499
- Rating – 4.7★
- Product description
- Size options: S, M, L, XL
- **ADD TO CART** button
- Size-selection component with **Default, Selected, and Disabled** variants

4. Shopping Cart Screen

- Selected products
- Product images and details
- Quantity controls
- Remove option
- Subtotal
- Delivery fee
- Total amount
- **CHECKOUT** button

5. Checkout Screen

- Delivery address
- Payment method
- Order summary
- Total amount
- **PLACE ORDER** button

Figma Features Used

- Frames
- Auto Layout
- Components
- Variants
- Icons
- Product cards
- Quantity controls
- Size-selection component
- Prototype interactions

Prototype Flow

Home → Product Listing → Product Details → Shopping Cart → Checkout

Additional interaction:

Size Selection → Selected Variant

ADD TO CART → Shopping Cart

CHECKOUT → Checkout

PLACE ORDER → Confirmation/Completed State

Screenshots

GitHub Repository

Repository:

<https://github.com/Shalini387/ITA0304-MC>

Result

The **StyleHub** clothing shopping application was successfully designed and prototyped in Figma with five screens. Components, Variants, Auto Layout, icons, and prototype interactions were used to create a consistent and interactive shopping experience.

Scenario 4 – Hospital Appointment Booking System

Title

Hospital Appointment Booking System – Healthcare UI

Objective

To design a mobile healthcare application using Figma that allows patients to search for doctors, view doctor details, select available appointment slots, and book appointments online.

Application Name

MediCare

Screens Designed

1. Welcome/Login Screen

- Hospital logo and app name
- Patient ID/email field
- Password field
- Forgot Password option
- Login button

2. Doctor Search Screen

- Search bar

- Medical specialties:
 - Cardiology
 - Dermatology
 - Neurology
 - Pediatrics
 - Orthopedics
- Filter option
- Doctor cards with photograph, name, specialization, rating, and experience

3. Doctor Profile Screen

- Doctor photograph
- Doctor name – Dr. Ananya Sharma
- Specialization – Cardiologist
- Experience – 10 Years
- Consultation Fee – ₹800
- Rating
- Available time slots
- Book Appointment button

4. Appointment Booking Screen

- Selected doctor
- Date selection
- Available time slots:
 - 10:00 AM
 - 11:00 AM
 - 2:00 PM
 - 4:00 PM
- Book Appointment button

5. Confirmation Screen

- Success/check icon
- Appointment confirmation message
- Patient name – Shalini Reddy
- Doctor name – Dr. Ananya Sharma
- Appointment date
- Appointment time
- Appointment ID – MED10245
- Back to Home option

Figma Features Used

- Frames
- Auto Layout
- Reusable Components
- Icons
- Doctor cards
- Time-slot components
- Buttons
- Consistent typography
- Prototype interactions

Prototype Flow

Login → Doctor Search → Doctor Profile → Appointment Booking → Confirmation

Additional navigation:

Doctor Card → Doctor Profile

BOOK APPOINTMENT → Appointment Booking

Book Appointment → Confirmation

Back to Home → Doctor Search

Screenshots

Figma Prototype Link

Figma Link: [Click Here](#)

GitHub Repository

Repository:

<https://github.com/Shalini387/ITA0304-MC>

Result

The **MediCare** hospital appointment booking application was successfully designed and prototyped in Figma with five connected screens. The design uses Auto Layout, reusable Components, icons, consistent typography, and Prototype interactions to provide a complete flow from doctor search to appointment confirmation.

Scenario 5 – College Event Registration Website

Title

College Event Registration Website – Responsive UI Design

Objective

To design a responsive technical symposium website using Figma that allows students to view event information, explore technical events, register for an event, and receive registration confirmation.

Website Name

TechSymp 2026

Screens Designed

1. Home Page

- TechSymp 2026 logo
- Navigation menu
- Event title
- Date – October 25, 2026
- Venue – College Auditorium
- Event introduction

- **REGISTER NOW** button

2. Events Page

- Technical events list
- Event name
- Description
- Event date
- Register button
- Events included:
 - CodeSprint – Competitive Programming
 - RoboChallenge – Robotics Competition
 - AI Innovate – Artificial Intelligence
 - Tech Quiz – Technical Quiz

3. Event Details Page

- Selected event – CodeSprint
- Event description
- Rules
- Eligibility
- Schedule
- Date and venue
- Registration option

4. Registration Page

- Student Name
- Email
- Department
- Year
- Selected Event
- **SUBMIT** button

5. Registration Confirmation Page

- Success/confirmation message
- Registration ID – TS2026-10245
- Selected event – CodeSprint
- Event date
- Confirmation message
- Back to Home option

Responsive Design

Both **desktop and mobile layouts** were created for the website using responsive Auto Layout and grids.

Figma Features Used

- Frames
- Responsive Auto Layout
- Components
- Grids
- Icons
- Event cards
- Form components
- Buttons
- Prototype interactions

Prototype Flow

Home → Events → Event Details → Registration → Confirmation

Additional navigation:

REGISTER NOW → Registration

Event → Event Details

SUBMIT → Confirmation

Back to Home → Home

Screenshots

Figma Prototype Link

Figma Link: [Click Here](#)

GitHub Repository

Repository:

<https://github.com/Shalini387/ITA0304-MC>

Result

The **TechSypm 2026** responsive event registration website was successfully designed and prototyped in Figma. The website includes desktop and mobile layouts, reusable components, responsive Auto Layout, grids, icons, and prototype navigation from the Home Page through event registration to confirmation.
